

BUTTERFLY MILKWEED
(ASCLEPIAS TUBEROSA)

PURPLE CONEFLOWER
(ECHINACEA ANGUSTIFOLIA)

WILD GERANIUM
(GERANIUM MACULATUM)

WE NEED POLLINATORS!

Pollinators like bees, butterflies, and moths support Minnesota's environment, economy, and way of life – and they play an essential role in food production. We can thank them for one out of every three bites of food we eat, including apples and tomatoes. We need them, and they need us. One big way we can help them is by providing pesticide-free habitat, with a variety of native flowering plants in gardens and landscapes.
